

Available Products

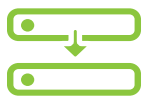

Green House Data provides custom IT infrastructure from energy-efficient, wind-powered data centers located across the United States, with locations in Georgia, New York, New Jersey, Oregon, Texas, Washington, Colorado, and Wyoming.

Cloud Hosting

The gBlock® cloud platform offers your choice of VMware powered public, private, or hybrid cloud, backed by 24/7 customer support – including a 15 minute response time – and a 100% SLA.

Colocation

From a few servers to complete racks, floors, or suites, get the connectivity you need within highly redundant, energy-efficient data center design. Two hours of remote hands included monthly.

Cloud Storage

Choose from file, block, or object storage to ensure your data and applications remain available anywhere, anytime. Customize the ideal balance of performance, price, and compatibility.

Backup as a Service

Speed up your backup windows, gain geographical diversity, reduce storage costs with deduplication, and backup to cloud storage, colocated arrays, or even tape.

Disaster Recovery

Work with expert technicians to set up a backup plan around your unique recovery objectives and time to recovery. Never lose access to your critical business applications and data.

Managed Security

Keep your systems safe and compliant with HIPAA, SOC 1 and 2 Type II, PCI-DSS, and other standards. Security options include monitoring, anti-virus, anti-malware, DDoS mitigation, and more.

Managed Services

Experienced engineers, technicians, and data center operations staff can assist your IT team with most processes, from firewall configuration to security hardening to VMware administration.

Desktop as a Service

DaaS or Virtual Desktop Infrastructure services from Green House Data provide flexible VMware Horizon desktops to your users, with greatly simplified management and updates.
