

Managed Services

If you lack the staff, knowledge, or time to complete upcoming IT projects and ongoing administration, Green House Data is ready to help. Every data center product is available as-a-Service, designed around your requirements with a 100% SLA and 24/7 Hear from a Human support.

Assessment, Implementation, and Ongoing Administration for Any Data Center Service

Managed services range from single projects to ongoing as-a-Service options, where turnkey hosted solutions are managed entirely by Green House Data staff, who have broad engineering experience across a variety of virtualization platforms, operating systems, applications, and hardware vendors.

Ultimately, managed services from Green House Data are focused around providing a reliable solution to a business problem facing your organization. That might be in the realm of communication, with hosted e-mail or collaboration platforms. It might come in the form of a backup of your critical applications and data to keep you online in case of disaster. Or it may be as simple as a few hours of remote hands for your data center equipment.

Whatever your IT needs, let's design an answer together. Options include:

- Managed colocation
- Infrastructure as a Service
- Security as a Service
- OS management, and updates
- 3rd party software management
- Standard server management
- SSL management
- Backup and disaster recovery
- Control Panel support
- Desktop as a Service
- Load Balancing as a Service
- Custom solutions

“We had a vision of what we wanted and Green House Data collaborated with us to realize that goal.”

Managed Services

IaaS / Server Management

Ready to move to the cloud, but lack the expertise or time to manage VMs? Cloud management delivers cloud infrastructure that just works. Packages can include monitoring, setup, security, and more.

OS & Software Management

Choose OS and/or third party software management to avoid security problems and performance issues stemming from outdated software, while allowing your team to focus on the user experience.

Security as a Service

Security services from Green House Data help protect your infrastructure with firewall management, patching and firmware updates, monitoring, IPS/IDS, encryption, and antivirus/antimalware.

Desktop as a Service

DaaS from Green House Data delivers fully featured desktop environments to a variety of end user devices, including PCs, laptops, phones, and thin clients. Includes Windows, anti-malware, and backup.

Colocation

Free your team from hardware management, with available services including environment design, monitoring, equipment installation, OS management, and remote hands.

Backup & Disaster Recovery

Backup and Disaster Recovery as a Service are both great additions for digital archiving and regaining IT functionality, respectively. Keep your applications, infrastructure, and data available at all times.

Load Balancing

Improve performance and increase availability with managed load balancing. Industry leading balancers help fight DDoS and avoid downtime from outages, connectivity issues, or underprovisioning.

Custom Solutions

If you don't see the solution you need listed, ask your infrastructure consultant. Chances are high that Green House Data can help design and manage a custom option for your IT systems.
