

Cloud Hosting

Green House Data provides VMware cloud hosting from data centers across the United States, with PAYG or allocation subscriptions and public, hybrid, or private configurations that are built to meet each client's individual infrastructure requirements.

Reliable Custom Cloud Hosting

The gBlock® cloud platform is a cost-effective, scalable, and customizable infrastructure solution. Whether you choose a self-service or managed cloud, your company will take advantage of a robust cloud environment that is completely secure, with full redundancy.

gBlock cloud hosting includes online management, choice of operating system, on-demand resource allocation, and simple system migration. It also offers many of the capabilities of dedicated servers, including root access and dedicated IP addresses, but with higher reliability, greater flexibility, and a lower total cost of ownership.

Complimentary Monitoring Tools

Get insight into resource utilization, networks, attached devices, and more without being charged a premium for monitoring software. The Green House Data customer portal and separate cloud monitoring tools provide the performance statistics administrators need.

Hear from a Human Support

We guarantee that every support ticket receives a response within 15 minutes or less. Every cloud hosting contract includes free 24/7/365 proactive customer service from expert technical staff. On average, nearly 30% of tickets are opened by this team before the customer is aware of an issue.

“**A company like ours depends on the service 100% of the time – we did everything humanly possible to figure out the best possible partner.**”

 **ARMUS** ARMUS Corporation

Cloud Hosting

Greener Hosting

Energy efficient facilities help reduce costs while maintaining true scalability, offering a simplified IT environment and ensuring performance on Energy Star hardware. Green House Data also purchases Renewable Energy Credits for over 100% of our annual energy consumption.

Speed and Availability

Green House Data's nationwide cloud is ideal for location-specific workloads and consistently ranks among top providers in Compuware's CloudSleuth service.

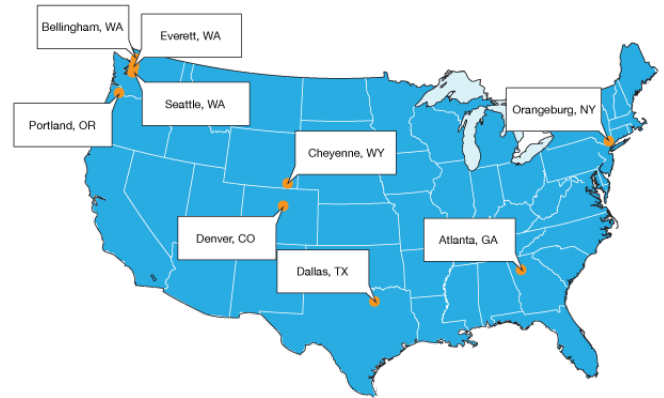

Unlimited Scalability

All resources can be grown based on immediate need. Clients can provision increased RAM, processor power, backup utilization and broadband on an as needed basis.

Flexible Billing

	Pay As You Go	Reserved
Cycle:	Hourly, billed monthly	Monthly
Cost:	\$\$	\$
Contract:	No contract, cancel anytime	Annual contract terms
Ideal For:	Testing and development, recovery, seasonal spikes	E-mail, databases, production servers

Nationwide Data Centers

Green House Data operates nine data centers across the United States. Choose the best location for low latency, disaster recovery, or satellite offices:

- Cheyenne, WY
- Denver, CO
- Seattle, WA
- Everett, WA
- Bellingham, WA
- Portland, OR
- Orangeburg, NY
- Atlanta, GA
- Dallas, TX

Cloud hosting can be supplemented with a variety of managed services, including:

Managed Cloud Options

- Cloud migration
- Disaster recovery
- Backup and restoration
- Hosted e-mail
- SharePoint
- OS setup, patching, and updates
- Security audit and hardening
- Network or resource monitoring
- Application performance tuning
- Load balancing
- Firewall setup and management
