

Hosted Sharepoint

With Hosted SharePoint from Green House Data, your SharePoint instance is hosted in secure off-site data centers and backed by expert technician support, available 24/7/365. Enable better organization and collaboration with round-the-clock reliability.

How Can SharePoint Help Your Business?

SharePoint is a web-based application from Microsoft that helps organizations work more effectively by letting users share and collaborate on documents, data, and information.

SharePoint's rich feature set enables companies to build customized intranet or extranet portals or public websites. SharePoint integrates with Microsoft's server, web and database technologies. It is one of the most widely used document sharing and collaboration platforms.

Stop e-mailing documents back and forth and get every department on the same page with coordinated content and calendars.

“ We rely on Green House Data's expertise to help engineer high availability solutions.”

Easily create, publish, and manage content for intranet, extranet, or public websites:

- Document version history and track changes
- Stay up-to-date with calendars, announcements, messages, photos, contacts, and wiki tools
- Publish content with centralized workflow and approval processes
- Comply with data retention regulations and litigation requests by preserving and holding information for eDiscovery

Quickly locate and exchange information across your business:

- Index content, query, and result pages for fast search and retrieval
- View and share microblogging and newsfeeds
- View community pages for specific teams, topics, or projects
- Visualize modeled data for insights through animations, queries, dashboards, and scorecards

Hosted SharePoint

SharePoint Applications

Intranet Portal

Businesses use intranet portals to communicate key internal information, supporting team and cross-functional collaboration. One example is a service-based business who tracks requests and orders via a customer relationship management (CRM) application. The business uses SharePoint to build dashboards and scorecards, facilitating real-time access to service requests and customer order data stored in a SQL Server. This helps the business quickly update customer priorities and allocate resources.

Extranet Portal

Extranet portals allow collaboration to extend beyond the on-premise networks, including relationships with customers, partners, and suppliers. An extranet portal makes business information easy to find for external stakeholders. One example is a manufacturer who enables resellers to view

SharePoint Add-Ons

Round out your SharePoint hosting with additional features and integration with other Green House Data products.

- SSL Certificates
- Domain Name Registration
- Business Class Email
- Email Archiving
